Technopartner Indonesia   *Yogyakarta, Indonesia*

- Learn coding using PHP with Bootstrap for visual and Laravel Framework and MySQL Database for data process.
- Developed web application PoS (Point of Sales).
- Create APIs for android application.

PROJECTS

Pijar Sekolah
Pijar Sekolah is an advanced educational platform designed to enhance the learning experience for students. Our platform offers an integrated digital learning system that supports schools in creating engaging and interactive digital lessons. As a Backend Developer on the Pijar Sekolah team, I am responsible for developing and maintaining the server-side functionality of our platform, ensuring that it is dependable, secure, and scalable. I collaborate closely with other team members to deliver a comprehensive solution that meets the needs of schools and educators, and I strive to continuously improve the platform to provide an even better experience for students.

Binekas Playshool Report Book

My Final Project is a web-based application that aims to streamline the process of inputting student scores and generating report cards for teachers. I have taken on the role of a Full Stack Developer, where I am responsible for designing, developing, and implementing both the front-end and back-end functionality of the application. My goal is to create a user-friendly interface that is easy for teachers to navigate and input student scores, and a robust back end that can effectively manage and organize the data. Through this project, I aim to provide a solution that can help teachers save time and effort in creating report cards, while also ensuring accuracy and consistency in student scores.

Ruang Dokter

A digital and technology-based health education platform that focuses on helping to create Indonesians healthy. I work as team and do my responsible as Backend Developer.

Point of Sales Application

The Point of Sales (POS) application is a web-based system designed to help stores efficiently manage their sales and customer interactions. As a Backend Developer on the team, I am responsible for designing, developing, and maintaining the server-side logic to ensure smooth and secure operation. The application provides tools for processing transactions, managing inventory, and handling customer data, all while incorporating robust security measures. Key features include real-time sales and inventory tracking, CRM capabilities, and comprehensive reporting to provide valuable business insights.
